

A guided walkthrough of the Nocturnal wallet

Five feature flows on Canton Network Devnet — from first sign-in to signing a swap — each step shown on-screen.

01 Onboarding

02 Transfer

03 History

04 Connect & Swap

05 Elfa AI

BEFORE YOU START

- **Pin the extension** from the Chrome toolbar so Nocturnal stays visible.
- **Use the Devnet network** throughout — it provides a faucet for free test Canton Coin and a block-explorer link on completed transfers, so every step runs without real funds.
- Have a **Google account** ready — sign-in is via Google.

Switching network signs you out. Changing the network from the dashboard header clears your session and returns you to Unlock/Welcome. Pick **Devnet** before onboarding so you don't have to unlock again.

User Onboarding

Onboarding opens in a **full browser tab** (the popup closes if it loses focus). The happy path runs Welcome → Google sign-in → Create Password → Save Private Key → Acknowledgment → Confirm → Dashboard.

1.1 Welcome

Choose your network — set it to **Devnet** — then click **Sign in with Google**.

Welcome screen with Devnet selected

Network selector — Devnet or Mainnet

1.2 Sign in with Google

A new tab opens the Google flow. Choose your account and approve the requested access (name, profile picture, email). You're returned to the wallet to set a password.

Continue

1.3 Create Password

This password encrypts your private key *on your device*. It must satisfy every listed rule, and both fields must match, before **Continue** enables.

Create Password

This password encrypts your private key locally.

Password

Confirm Password

- At least 8 characters
- Uppercase letter
- Lowercase letter
- A digit
- Special character

Rules satisfied – Continue enabled

1.4 Save your private key

A new key pair is generated. **Save this key securely** — it is the only way to recover your wallet. Switch `Base64 / Hex`, **Reveal** to view, and **Copy** to save it, then click **I've Saved My Key**.

Your Private Key

1.5 Security Acknowledgment

Check all three boxes to confirm you're responsible for your key, then **Continue**.

A mobile app screen titled "Security Acknowledgment" with a dark background. At the top left is a back arrow and the text "< Back". Below the title is the instruction "Please confirm you understand the following." There are three list items, each with a red checkmark icon and a text statement. At the bottom is a red "Continue" button.

< Back

Security Acknowledgment

Please confirm you understand the following.

- ☒ I understand that I am fully responsible for keeping my private key safe.
- ☒ I understand that if I lose my private key, my funds cannot be recovered.
- ☒ I understand that anyone who has my private key can access my funds.

Continue

All acknowledgments checked

1.6 Confirm

Type the phrase exactly — *"I accept full responsibility for my wallet keys and backups."* — then **Complete Setup** to land on the dashboard.

< Back

Confirm

Type the following phrase exactly to confirm:

"I accept full responsibility for my wallet keys and backups."

I accept full responsibility for my wallet keys and backups.

Complete Setup

Typed confirmation

1.7 Unlock (returning users)

When the wallet locks, you'll see **Wallet Locked**. Enter your password and **Unlock**. Use **Sign in with a different account** to switch Google accounts.

Unlock screen

The wallet auto-locks after a period of inactivity, returning you to the Unlock screen.

Transfer Canton Coin

The dashboard's bottom bar holds `Wallet · Send · Offers · History · Insights`. The header shows your email and your **party ID** (with a copy button) — the address others send to.

Dashboard header — email + party ID

2.1 Wallet & balances

The **Wallet** tab lists your tokens. A fresh account shows **Canton Coin** at a balance of 0; after funding, each token shows its balance.

Fresh account – Canton Coin at 0

Funded – Canton Coin + Canton Bitcoin

No pre-approval step needed. A transfer pre-approval is registered for you automatically during onboarding, so you can receive Canton Coin right away — you should *not* see any “Register Transfer Pre-Approval” banner.

2.2 Get test funds (Faucet, Devnet)

Tap the **Canton Coin** row to open **Token Details**. On Devnet this screen includes a **Faucet** card — enter an amount, your password, and **Request ... CC**. Refresh after a few seconds to see the balance update.

Token Details with Faucet card

Token Details – funded, with admin info

2.3 Send a transfer

On the **Send** tab, pick `CC – Canton Coin`, paste the **Recipient Party ID**, enter an **Amount** (**MAX** sends everything available), then **Continue**.

The screenshot shows a dark-themed mobile application interface for sending a transfer. At the top, the wallet address is displayed as `wallet@nocturnal.xyz` and `nocturnal-wallet::1220322546...9af0512f8c`. Below this is a section titled "Transfer". Under the "Token" label, a dropdown menu shows "CC — Canton Coin". The "Available" balance is shown as "100". The "Recipient Party ID" field contains the long alphanumeric string `nocturnal-wallet::122018a579381e1583fa9a6f9d09962037d32522d0c47516d90f0e038`. The "Amount (min: 10)" field has a text input with "10" and a "MAX" button. At the bottom is a large red "Continue" button.

Transaction History

The **History** tab lists each transfer with its amount and token, a **status badge**, the timestamp, and the sender → receiver parties. Transfers received via the automatic pre-approval show as **AUTO APPROVED**.

An AUTO APPROVED transfer

Other states (no screenshot): a brand-new account shows “No history”; history pages 5 entries at a time, with [Prev / Next](#) once you exceed 5; and the **Offers** tab holds Incoming/Outgoing offers for token-standard (non-Canton Coin) transfers, which you can Approve, Reject, or Withdraw. Canton Coin transfers settle directly and don't create offers.

Connect a dApp & Swap on Kairo

Kairo is a Canton DEX — a separate web app that connects to Nocturnal for approvals and signing. There's no swap screen inside the wallet; a swap surfaces in Nocturnal as approval popups.

Unlock Nocturnal first. The dApp approval popups have *no password field* — they sign using your already-unlocked session. If the wallet is locked, the request fails.

4.1 Open Kairo and connect

On the Kairo DEX, click **Connect Canton Wallet**. Kairo detects installed wallets and lists **Nocturnal** among the options — select it.

Kairo DEX – Connect Canton Wallet

Wallet picker – Nocturnal listed

4.2 Approve the connection

Nocturnal opens a **Connect Request** showing the site's origin (e.g. `https://devnet.kairo.ag`) — click **Approve**. Kairo then asks you to sign a sign-in message; Nocturnal shows a **Sign Message Request** with its contents (`"Sign-in to Kairo DEX"`) — **Approve** again.

Connect Request

Sign Message Request

Connected

Kairo now shows your connected account and the exchange interface.

Elfa AI Insights

The **Insights** tab has four sub-tabs — Tokens · Narratives · Search · Chat — with a 24h / 7d window toggle on the data tabs. The footer reads *“Powered by Elfa”*.

Tokens (trending)

The default view ranks tokens by social mentions, with a change % and a mindshare bar; a pinned **Canton Coin** card shows its price. Tap a token for its **top mentions**, then expand a mention for **account credibility** (smart followers, reach, engagement).

Trending tokens

Token detail – top mentions + credibility

Narratives & Search

Narratives groups trending clusters; expand **Show sources** for the @handle sources. **Search** queries social mentions for any token or keyword, with quick chips (Canton, CC, cBTC, cETH, SPCX) and per-row credibility.

Narratives

Search results

Chat (AI market chat)

Ask Elfa about the market. From the empty state, type a question (e.g. *“Give me today's market insight”*) and send — a **Thinking...** placeholder shows while it responds, then the reply renders with formatting. **New chat** (top-right) clears the conversation.
